

We are proposing the making of a website that will have information about the top 5 Toronto sports teams (hockey, basketball, baseball, football, and soccer).

1. Our proposed website will use photos and videos to show clips and highlights from previous games involving the 5 sports teams. Text will be a common element being used to describe the teams and other info. Tables will be used to show recent statistics and game schedules for the 5 teams.
2. The user will be able to add to the list of statistics and game schedules allowing for the site to be more easily kept relevant. Analytics will be used to visually display the statistics in the sites database.
3. The database, as mentioned, will be used to store statistics about the team's recent games, the scores for said games, as well as statistics for players on the 5 teams.
